

# SALTFREEMAX™

## The System

- A Carbon Filter (highly recommended)** – A filter that reduces chlorine and removes taste and odor from water while protecting the SaltfreeMAX media from deterioration due to chlorine exposure.
- B IN/OUT Valve Head** – An eco-sensitive valve head that uses no electricity to move water in and out of the tank, so there's no concern for power outages or wasting energy.
- C SaltfreeMAX Tank** – A best-in-industry fiberglass/polyethylene tank with excellent strength and durability for reliable performance everyday.
- D SaltfreeMAX Media Resin** – A revolutionary media designed to crystalize calcium and magnesium in water so it won't scale or attach itself to fixtures, appliances, glass or dishes. It does all this without wasted water or chemicals for regeneration – a truly green technology.

## How It Works

- 1** Untreated water flows through an optional carbon pre-filter for improved taste, odor and chlorine removal and protection of the SaltfreeMAX media.
- 2** Water flows down through tank center tube.
- 3** Water flows up through fluidized SaltfreeMAX media that causes calcium and magnesium (hardness ions) to form into nano-crystals. Once bound in nano-crystals, these hardness minerals can't scale or attach to anything in the home.
- 4** Scale free water enters your home, preserving fixtures and appliances, while also saving water and energy.
- 5** The system uses no electricity, regeneration chemicals, or regeneration water.
